

美國物理學會APS(American Physical Society)是成立於1899年的學術研究機構，其最初成立宗旨，乃在於促進並推廣物理學方面的知識與資源，並為全球各學術與研究單位，提供自1893年以來在《Physical Review》上所刊載的物理學研究文獻資料，讓使用者能簡單快速進入此一豐富的資源寶藏，建立便捷的使用途徑；APS另一個重要出版品：《Physical Review Online Archive》(PROLA)，將《Physical Review》上所有期刊文章掃描，並存成PDF或GIF檔案格式，其中包括期刊原文、標題、作者、摘要、照片說明，以及參考資料等完整的檢索，本校可使用《Physical Review (Series I) and Physical Review》1893至1969年份的Archive資料，收錄相當完整豐富的回溯文獻，值得物理學、凝態物理學及粒子物理學等相關領域研究者充分利用。

本校2017年APS電子期刊收錄清單如下表所列，其中《Reviews of Modern Physics》為季刊，此刊在物理學領域具相當影響力，2015年期刊影響指數(Impact Factor)達到33.177，在「Physic,Multidisciplinary」Category居冠。

2017年APS電子期刊收錄清單

期刊名稱	ISSN	EISSN	Coverage	2015年 Impact Factor
Physical Review A	1050-2947	1094-1622	1970-2016	2.765
Physical Review B	1098-0121	1550-235x	1970-2016	3.718
Physical Review C	0556-2813	1089-490x	1970-2016	3.146
Physical Review D	1550-7998	1550-2368	1970-2016	4.506
Physical Review E	1539-3755	1550-2376	1993-2016	2.252
Physical Review Applied	None	2331-7019	2014-	4.061
Physical Review Letters	0031-9007	1079-7114	1958-2016	無
Reviews of Modern Physics	0034-6861	1539-0756	1929-2016	33.177
Physical Review Fluids	None	2469-990x	New in 2016	無

ABSTRACT

The oldest known magnetic material, magnetite, is of current interest for use in spintronics as a thin film. An open question is how thin can magnetite films be and still retain the robust ferrimagnetism required for many applications. We have grown 1-nm-thick magnetite crystals and characterized them *in situ* by electron and photoelectron microscopies including selected-area x-ray circular dichroism. Well-defined magnetic patterns are observed in individual nanocrystals up to at least 520 K, establishing the retention of ferrimagnetism in magnetite two unit cells thick.
